

A screening output does not confirm the next handoff.

An output may exist without an operational record showing the next agreed service received the handoff. Follow the program's existing clinical pathway.

Proposed response

1. Map the program-approved stages and the existing tools recording them. Identify how the episode is linked across stages.
2. For each operational handoff, name the receiving role, receipt evidence and unresolved-exception route.
3. Test a fictional episode. Keep missing, pending and declined states separate from completion. Clinical interpretation and thresholds stay with qualified program owners.

Checklist

- [] The program-approved next step is identified.
- [] The episode links across agreed operational stages.
- [] Receipt and exception ownership are recorded.
- [] Pending and unknown follow-through are separate from completion.

Worked example

Fictional example, not a client record or reported outcome.

Episode	Fictional screening episode
Stage	Handoff to the program-approved next service
Evidence	Receiving-service acknowledgement or approved disposition
Exception	Receipt is unconfirmed
Next action	Program owner follows the established escalation route

Check it locally. Inspect the sources.

Run the check

Trace a fictional episode with unknown next-service receipt. Does the unknown state stay visible with an owner, rather than becoming completed?

Candidate local measure

For an agreed eligible cohort, count documented receipt or disposition. Report pending, declined and unknown states separately. Do not infer treatment linkage from a screening count.

Scope

This guide concerns operational records. It does not recommend clinical thresholds, diagnose disease or change the program pathway.

Independent public sources

Chennai mobile screening deployment study

Primary deployment study | S048 | Checked 2026-10-25

The Chennai study reported 25,598 people screened in 2022 using four mobile units.

Limit: The analysis used radiologist annotations; it does not quantify handoff completion or a Clinopilot effect. Authors include vendor staff.

Proposed checks are Clinopilot operational synthesis. Independent sources do not establish a Clinopilot client result.
